

PRODUCT REQUIREMENTS DOCUMENT (PRD)

MENOWELL

Version: 1.0

Status: MVP

Document Owner: Product Team

Product Type: Women's Health & Wellness Platform

1. PRODUCT OVERVIEW

Menowell is a menopause support platform designed to help women understand, track, and manage menopause through symptom tracking, stage identification, personalized wellness insights, educational resources, and community support.

The platform serves women across:

- Perimenopause
- Menopause
- Postmenopause

Unlike generic symptom trackers, Menowell combines health monitoring, education, emotional support, and AI-powered wellness guidance in a single experience.

Unique Value Proposition

"Understand your menopause journey with confidence."

Menowell helps women:

- Track symptoms
- Understand symptom patterns
- Identify the likely menopause stage
- Receive personalized insights
- Learn from trusted resources
- Connect with supportive communities

without needing medical expertise.

2. PRODUCT VISION

To become the most trusted menopause companion for women globally by making menopause easier to understand, manage, and navigate.

3. PROBLEM STATEMENT

Millions of women experience:

- Hot flashes
- Night sweats
- Sleep disruption
- Mood changes
- Brain fog
- Fatigue
- Anxiety
- Irregular menstrual cycles

Many women:

- Don't understand what stage of menopause they are experiencing
- Receive conflicting information online
- Lack culturally relevant support
- Feel isolated
- Cannot identify symptom patterns

Current solutions often focus on symptom logging without providing meaningful interpretation, education, or community support.

4. OBJECTIVES

Primary Objectives

- Help women understand menopause symptoms
- Improve symptom awareness
- Support self-management
- Deliver personalized wellness guidance
- Build a supportive menopause community

Secondary Objectives

- Increase health literacy
 - Encourage consistent symptom tracking
 - Improve engagement through personalized content
 - Generate anonymous population-level insights in the future
-

5. TARGET USERS

Primary Users

Women aged 35–65 experiencing:

- Perimenopause
- Menopause
- Postmenopause

User Characteristics

- Mobile-first users
- Non-medical professionals
- Seeking simple explanations
- Looking for emotional support
- Interested in symptom management

Secondary Users

- Women's health advocates
 - Healthcare educators
 - Researchers (anonymized data only)
-

6. MARKET INTELLIGENCE

Market Analysis

Industry Trends

The FemTech industry continues to grow rapidly due to:

- Increased awareness of women's health

- Growing demand for personalized healthcare
- Expansion of AI-powered wellness products
- Increased digital health adoption
- Greater openness around menopause discussions

Opportunity

Women need:

- Reliable menopause information
- Symptom tracking tools
- Personalized wellness insights
- Emotional support systems
- Safe communities

Few solutions combine all these functions into a single product.

7. COMPETITOR ANALYSIS

Clue

Strengths

- Strong tracking capabilities
- Large user base
- Trusted brand

Weaknesses

- Primarily focused on menstrual health
 - Limited menopause-specific personalization
-

Balance

Strengths

- Menopause-focused
- Educational resources

Weaknesses

- Limited community experience
 - Less personalized symptom interpretation
-

MenoLife

Strengths

- Menopause education
- Lifestyle recommendations

Weaknesses

- Limited AI capabilities
 - Less robust tracking
-

Generic Health Apps

Strengths

- Broad functionality

Weaknesses

- Not menopause-specific
- Poor contextual guidance

8. MENOWELL POSITIONING

Menowell is not:

- A diagnosis tool
- A replacement for medical care
- A generic symptom tracker

Menowell is:

- A menopause companion
 - A personalized education platform
 - A symptom intelligence system
 - A support community
-

9. SWOT ANALYSIS

Strengths

- Menopause-focused experience
- Personalized insights
- Community support
- Educational resources
- High engagement potential

Weaknesses

- Requires ongoing user participation
- Insight quality depends on user data quality

- Initial community growth challenge

Opportunities

- Rapid FemTech growth
- Partnerships with healthcare organizations
- Expansion into multiple regions
- Wearable integrations
- Healthcare provider dashboards

Threats

- Established FemTech competitors
 - Privacy concerns
 - Regulatory changes
 - User distrust of AI-generated health insights
-

10. CORE FEATURES

User Accounts

- Registration
 - Login
 - Password recovery
 - Profile management
-

Symptom Tracking

Users can:

- Log symptoms daily
 - Rate symptom severity
 - Add notes
 - Track symptom history
 - View trends
-

Menopause Stage Identification

System evaluates:

- Age
- Menstrual status
- Symptom patterns

Stages:

- Premenopause
 - Perimenopause
 - Menopause
 - Postmenopause
-

Personalized Insights

Generate:

- Symptom summaries
- Wellness observations
- Trend explanations

Disclaimer required:

"This information is educational and not medical advice."

Educational Library

Content Categories:

- Symptoms
 - Hormonal changes
 - Sleep
 - Mental wellbeing
 - Nutrition
 - Exercise
 - Lifestyle management
-

Community Forum

Users can:

- Create posts
 - Reply to posts
 - React to posts
 - Report harmful content
 - Post anonymously
-

Notifications

Support:

- Symptom reminders
- Community engagement alerts
- Wellness tips

- Educational recommendations
-

11. USER FLOWS

Onboarding Flow

1. Create account
 2. Complete profile
 3. Record menopause information
 4. Select notification preference
 5. Enter dashboard
-

Daily Tracking Flow

1. Open tracker
 2. Select symptoms
 3. Rate severity
 4. Add notes
 5. Save log
 6. Update dashboard
-

Community Flow

1. Create post
2. Publish
3. Receive responses
4. Continue engagement

Insight Flow

1. User submits symptom logs
 2. The system analyzes trends
 3. Insight generated
 4. Insight displayed
-

12. DATA MODELS

Users

- id
 - email
 - full_name
 - birth_date
 - menopause_status
 - preferred_language
 - notification_enabled
 - created_at
-

Symptom Logs

- id
- user_id
- symptom_name
- severity
- note

- logged_at
-

Symptom Catalog

- id
 - symptom_name
 - category
 - description
-

Menopause Stage

- id
 - user_id
 - stage
 - confidence_score
 - updated_at
-

AI Insights

- id
 - user_id
 - insight_text
 - generated_at
-

Educational Content

- id

- title
 - category
 - content
 - language
 - created_at
-

Community Posts

-

13. SYSTEM BEHAVIOR

- Dashboard updates after symptom submission
 - Insights generated from symptom history
 - Wellness scores recalculated automatically
 - Community updates appear in real time
 - Notification preferences respected
-

14. NOTIFICATION LOGIC

Daily Reminder

Condition:

No symptom log submitted for the current day.

Action:

Send a reminder notification.

Insight Available

Condition:

New insight generated.

Action:

Notify user.

Community Interaction

Condition:

Reply received.

Action:

Send engagement notification.

15. SECURITY & PRIVACY

Requirements:

- Secure authentication
- Role-based access controls
- Encryption of sensitive data
- Audit logging
- Data export functionality
- Account deletion functionality

Privacy Principles:

- User consent required
 - Data minimization
 - No sale of personal health data
 - Transparency around AI-generated insights
-

16. ACCESSIBILITY

Support:

- Large text options
 - Dark mode
 - Multiple languages
 - Screen reader compatibility
 - High contrast mode
-

17. EDGE CASES

Invalid symptom entry

Action:

Prevent submission.

No symptom history

Action:

Display empty state.

Internet unavailable

Action:

Store offline and sync later.

Insight generation failure

Action:

Show fallback message.

Reported community content

Action:

Queue for moderation review.

18. SUCCESS METRICS (KPIs)

User Metrics

- Daily Active Users
- Monthly Active Users
- Retention Rate

Engagement Metrics

- Symptom Logs per User
- Community Participation Rate
- Educational Content Consumption

Product Metrics

- Insight Generation Success Rate
- Notification Engagement Rate
- Wellness Score Update Accuracy

Business Metrics

- User Growth Rate
 - Referral Rate
 - Community Growth Rate
-

19. FUTURE ROADMAP

Phase 2

- Health report export
- Doctor-ready PDF summaries
- Additional language support

Phase 3

- Wearable integrations
- Advanced AI recommendations
- Provider dashboard

Phase 4

- Research partnerships
 - Predictive symptom forecasting
 - Enterprise healthcare offerings
-

20. MVP DEFINITION

The first release must include:

- Authentication
- User profile
- Symptom tracking

- Menopause stage identification
- Personalized insights
- Educational library
- Community forum
- Notifications
- Dashboard
- Privacy controls

Anything beyond these features should be considered post-MVP.

21. TECHNICAL RECOMMENDATIONS

Recommended Architecture

Use a modern full-stack architecture that supports:

- Fast MVP development
 - Strong security
 - Scalability
 - AI integrations
 - Real-time features
 - Future mobile application expansion
-

Frontend

Next.js

Reason:

- Excellent developer experience
- Fast performance
- SEO-friendly educational content

- Server-side rendering support
- Large ecosystem
- Production-ready

Benefits for Menowell:

- Fast dashboard loading
 - Better educational content discoverability
 - Easier scaling
-

Backend

Next.js API Routes / Server Actions

Reason:

- Unified codebase
- Faster development
- Reduced complexity
- Ideal for MVP development

As the platform grows:

Backend services can be extracted independently without major refactoring.

Database

PostgreSQL

Reason:

- Reliable relational database
- Excellent for health-related structured data

- Strong reporting capabilities
- Mature ecosystem

Ideal for:

- User profiles
 - Symptom logs
 - Insights
 - Community posts
 - Notifications
-

ORM

Prisma

Reason:

- Type-safe database access
 - Faster development
 - Simplified migrations
 - Excellent PostgreSQL support
-

Authentication

Auth.js (NextAuth)

Support:

- Email authentication
- Social login
- Session management
- Secure user access

AI Layer

OpenAI API

Use for:

- Symptom trend explanations
- Personalized wellness insights
- Educational content recommendations

Important:

AI outputs must always include:

"This information is educational and not medical advice."

File Storage

Cloud Object Storage

Use for:

- Profile images
- Community uploads
- Educational assets

Requirements:

- Secure
 - Scalable
 - CDN-enabled
-

Real-Time Features

WebSockets

Required for:

- Community notifications
 - Real-time engagement updates
 - Future live support features
-

Search Engine

PostgreSQL Full-Text Search

MVP Phase

Used for:

- Educational content search
- Community post search

Future Phase

Upgrade to dedicated search infrastructure if required.

Analytics

Product Analytics Platform

Track:

- Symptom logging behavior
- Retention

- Feature adoption
 - Community engagement
 - Notification performance
-

Monitoring

Required:

- Error tracking
- Performance monitoring
- User session monitoring

Goals:

- Fast issue detection
 - Improved reliability
 - Better user experience
-

Security Requirements

Implement:

- Encrypted communication
 - Password hashing
 - Role-based access controls
 - Audit logging
 - Rate limiting
 - Input validation
-

Infrastructure

Cloud Hosting Platform

Requirements:

- Automatic deployments
 - Database management
 - Environment management
 - Scalability
-

Scalability Strategy

Phase 1 (MVP)

- Monolithic architecture

Phase 2

- Service separation when required

Phase 3

- Independent AI service
 - Dedicated notification service
 - Dedicated analytics service
-

Why This Stack

This stack optimizes for:

- Fastest path to MVP
- Lowest maintenance burden
- Strong developer experience
- Future AI capabilities

- Future mobile application support
- Healthcare-grade scalability

while keeping development complexity low during the first release.
